PAX Wallet

Web Settings · https://wiki.simfly.io/docs/pax-wallet/

Introduction

The **PAX Wallet** is the main tool that allows every user to monitor all movements of **PAX Tokens** within the SimFly platform.

It records all **incoming and outgoing transactions** related to flight activities, missions, asset ownership, splits, and upgrades — as well as any **buying and selling operations** carried out within the **User Marketplace**.

PAX Wallet

Main Features

The **PAX Wallet** allows you to:

- View the **total available balance** of your PAX Tokens.
- Check the **complete history** of PAX inflows and outflows.
- Track transactions generated by **flights, missions, asset ownership, splits, and upgrades**.
- Verify **PAX Token sales and purchases** between users through the **User Marketplace**.
- Keep track of PAX Token usage for purchasing assets (Licenses, Aircraft, Airports, Upgrades, etc.).
- Monitor the **status of each transaction**:
  - **Completed** → successfully completed transaction.
  - **On Hold** → PAX temporarily locked during a sale.
  - **Cancelled / Refunded** → transaction canceled or refunded.

Transaction Filters and Reports

The **PAX Wallet** includes an **advanced filtering section** that allows you to analyze every recorded operation in detail.
You can filter transactions by:

- **Time period**
- **Amount**
- **Transaction status**
- **Type of movement**

Soon, users will also be able to **export all results in CSV format**, allowing for external analysis or personal record keeping of past operations.
