User Marketplace Guide

Marketplace · https://wiki.simfly.io/docs/user-marketplace-guide/

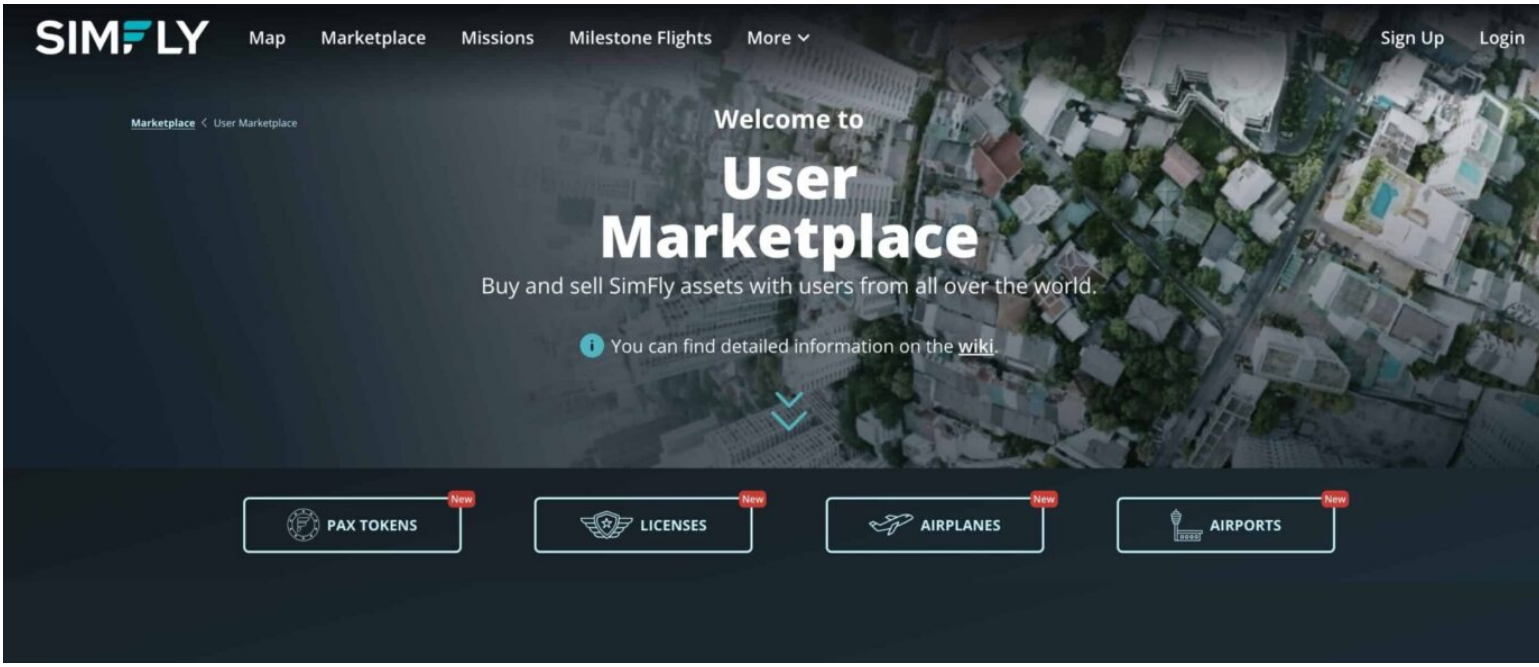

Introduction

The **User Marketplace** is one of the core features of **SimFly**.
It represents the heart of the platform’s internal economy, where users can sell or purchase SimFly digital assets — such as **PAX Tokens**, **Pilot Licenses**, **Aircraft**, and **Airports** — in a secure, regulated, and transparent environment.

The system is operated by **SimFly** as an **intermediary and showcase platform**, ensuring proper technical functionality, operational security, and financial transparency among users.

Through the **User Marketplace**, users have the opportunity to **generate real value in USD**, turning their flight activities or owned assets into tangible profits through **sales made to other users within the platform**.

Note: Trading of **Pilot Licenses**, **Aircraft**, and **Airports** will be available in future versions.
At this time, users can only trade **PAX Tokens** with each other.

User Marketplace SimFly

Purpose of the User Marketplace

The **User Marketplace** has been designed to provide a **safe and regulated environment** where users can **freely sell or purchase** their own assets or **PAX Tokens**, through the direct intermediation of **SimFly**, generating real USD profits from their in-platform activities.

The main goals are:

- **To enable** secure and transparent trading between users, guaranteed by SimFly's monitoring and intermediation systems.
- **To assign** real value to the activities carried out within SimFly, allowing users to turn the time and passion dedicated to flight simulation and the platform itself into measurable results.
- **To create** an autonomous and transparent economy, driven by real market dynamics of supply and demand among players.
- **To allow** both new and veteran users to access advanced assets already developed by other players, or to obtain the **PAX Tokens** required to purchase new assets — either through the **User Marketplace** or the **SimFly Bank Marketplace** — upgrade their existing assets, or take part in specific missions.

Each user is free to define their own economic and growth strategies within the SimFly ecosystem, in compliance with the rules and conditions set out in the platform's Terms and Conditions.

- **To promote** a balanced and sustainable SimFly ecosystem, where value circulates transparently among users, contributing to the stability and long-term continuity of the platform.

Structure of the User Marketplace

The **User Marketplace** is organized into several **main categories**, visible on the system's main page.
Each category represents a specific type of asset **owned and listed for sale by users**, which can be **purchased by other users** within the SimFly ecosystem.

Note: SimFly does not directly list assets or PAX Tokens in the User Marketplace.
The entire system is dedicated exclusively to **user-to-user trading**, managed in an autonomous, secure, and regulated environment.

The **currently available categories** are:

- **PAX Tokens** – token packages available for trading between users.
- **Pilot Licenses** – basic or advanced licenses available for trading between users.
- **Airplanes** – basic or advanced aircraft available for trading between users.
- **Airports** – basic or advanced airport infrastructures available for trading between users.

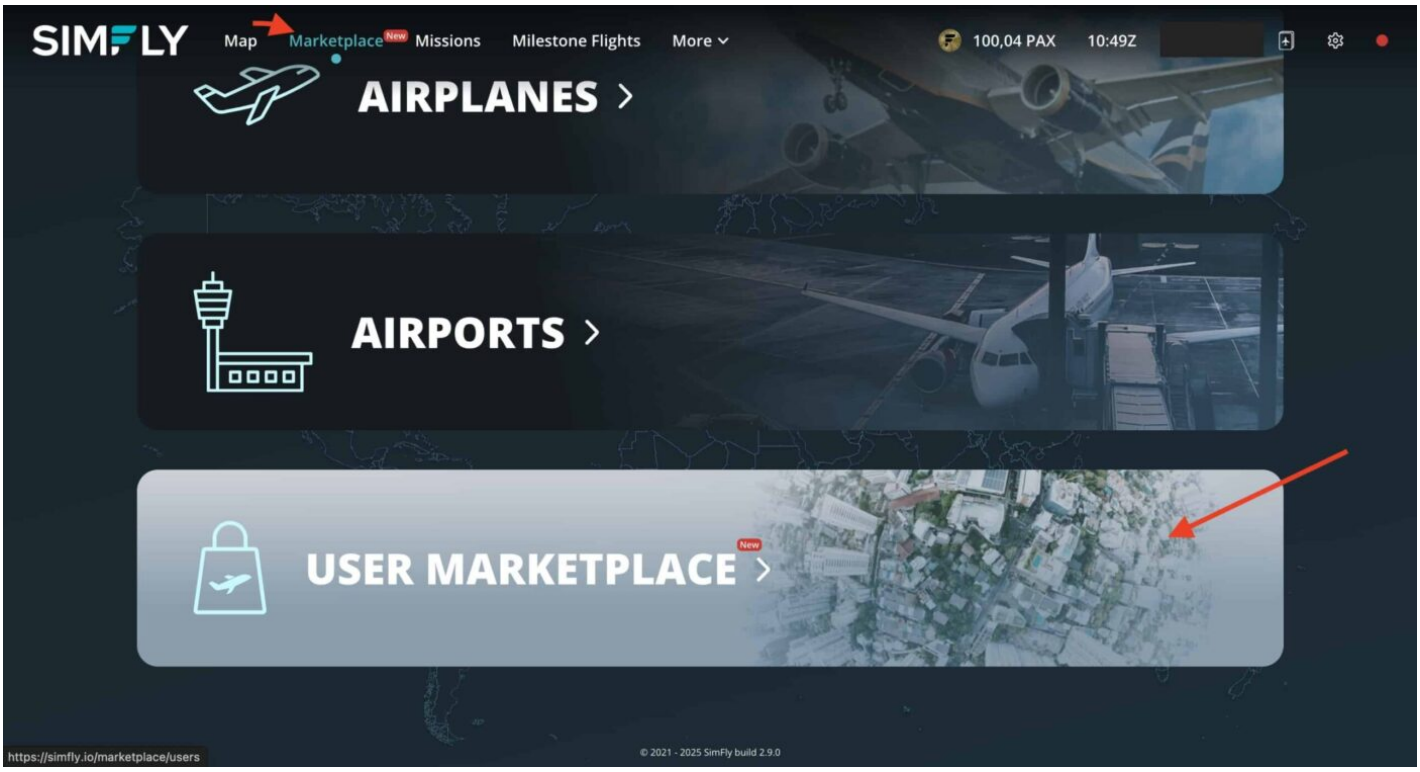

All categories will follow the same logic:
each user can **create a listing** based on the assets they own and **according to the platform's rules**, put it up for sale, and make it available to other players — fostering **a dynamic, transparent, and regulated exchange environment**.

Currently, the following categories are available in the User Marketplace: PAX Tokens, Pilot Licenses, and Airplanes.

How the User Marketplace Works

1. Accessing the Marketplace

From the **main menu** of the platform, select **Marketplace**.
On this page, you'll find the three sections dedicated to **official SimFly Bank assets**, and further down, the **User Marketplace**, which provides access to the area dedicated to **user-to-user trading**
.

Marketplace

Once inside, choose the **category** you want to explore — for example, **PAX Tokens**.

Within each category, you can browse all **active listings** published by other users, displayed in different **view modes**:

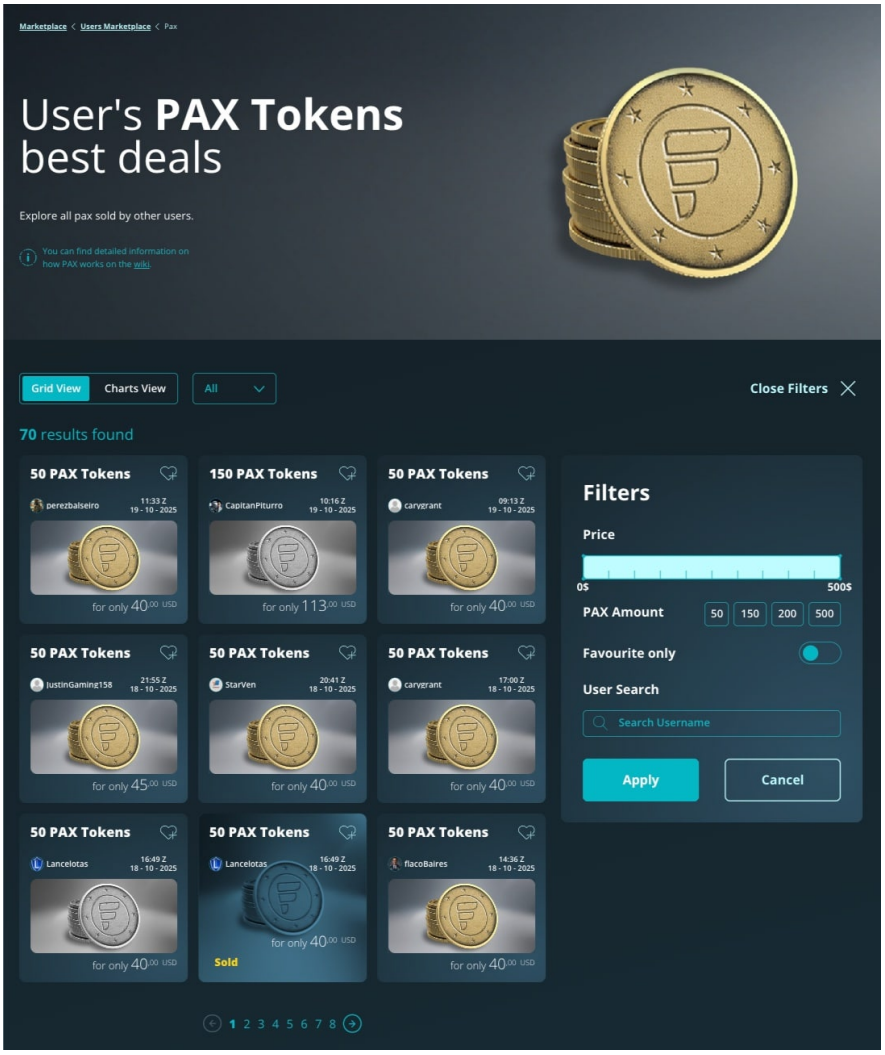

- **Grid View** – shows offers in a card format;
- **Charts View** – allows you to view listings in a comparative format.

Listings that have already been sold are marked with the **"Sold"** label, helping users get an overview of **market prices** and **recent transactions**.

You can also choose to display only the listings that are **currently on sale (“On Sale”)**, or **all listings**, including those already sold (**“Sold”**), to analyze the market trend over time.

You can further refine your search using the **Filters** section, where you can:

- select the **PAX Token quantity** (50, 150, 200, or 500);
- set a **price range**;
- view listings from your **favorite users** only;
- search for a **specific user** using the dedicated search field.

PAX Tokens User Marketplace

2. Purchasing Assets

Buying an asset in the **User Marketplace** is very simple.
Choose the category you want to explore and **browse the available listings** published by other users.

Each listing card displays:

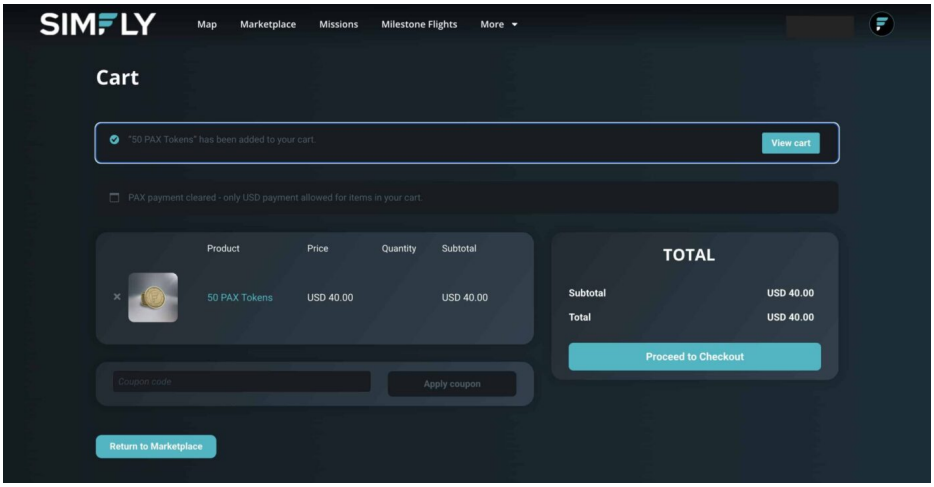

- the **quantity or type of asset** (e.g., *50 PAX Tokens* or *Pilot License – Advanced*);
- the **seller's name**;
- the **price in USD**, and for some categories (such as Licenses, Aircraft, or Airports), also in **PAX Tokens**;
- the **date and time** the listing was created.

Click **Buy Now** to proceed to checkout, or if you prefer, **add multiple items to your cart** to complete the purchase in a single transaction.

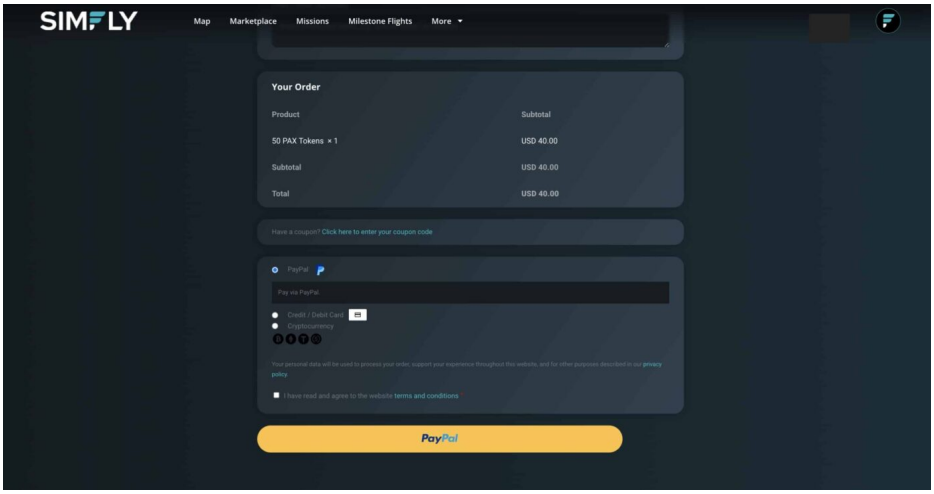

All **payments are processed through SimFly**, which acts as an intermediary between buyer and seller.
Payment details are never shared with the other party, ensuring **security and privacy** for every transaction.

Once the purchase is complete, you can view all **transaction details** in your **PAX Wallet**, **Fiat Wallet**, or **Active Assets** section, depending on the type of asset purchased.

You will also receive an **email notification** confirming your completed order, including **all purchase details** and a summary of the transaction.

Cart

3. Selling Assets and Managing Your Listings

Selling an asset in the **User Marketplace** is very simple.

Go to **Settings** → **My Assets on Sale**.
Select the asset you want to sell (for example, part of your **PAX Tokens** balance or a **Pilot License**).
Click **+ Create new sale** to create a new listing.

Enter the **quantity**, set the **price**, and confirm the sale.
Your listing will appear immediately in the **User Marketplace**, visible to all users.

All sales are completely **automated**:
SimFly acts as an **intermediary** to ensure the **accuracy, security, and traceability** of every transaction.

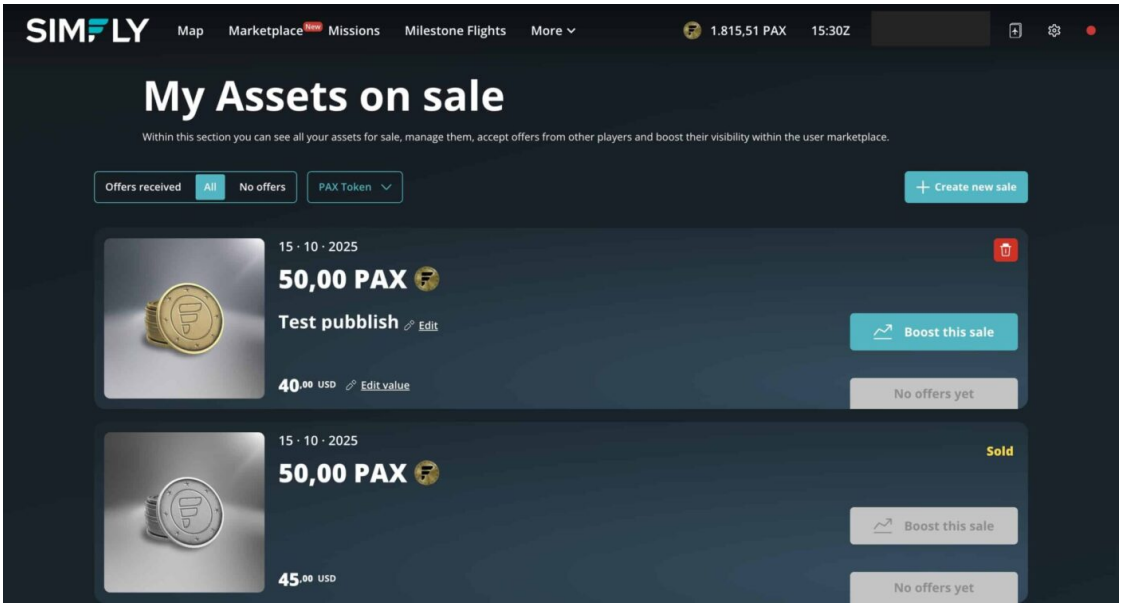

Managing Active Listings

In the **My Assets on Sale** section, you can:

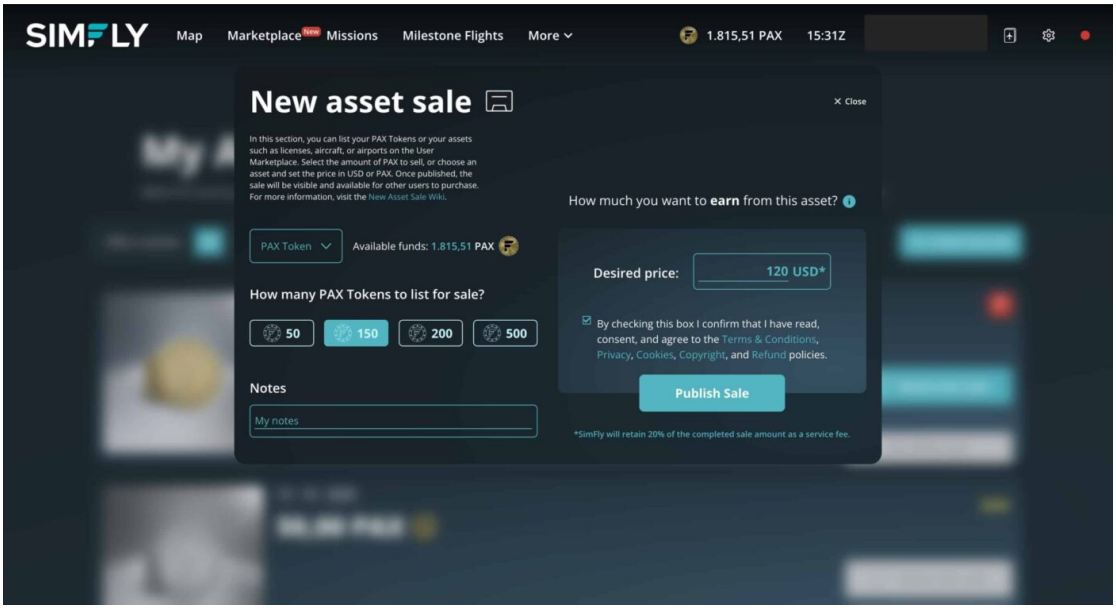

- modify or delete existing listings;
- check the **status of each listing** (Active, Sold, or Removed);
- view in real time the total number of listings and the quantity of assets currently for sale.

All transactions are automatically recorded in your **PAX Wallet** or **Fiat Wallet**, depending on the type of operation.

For more information about the available functions and input fields, visit the dedicated pages:
[**Guide to My Assets on Sale →**]

My Assets on Sale

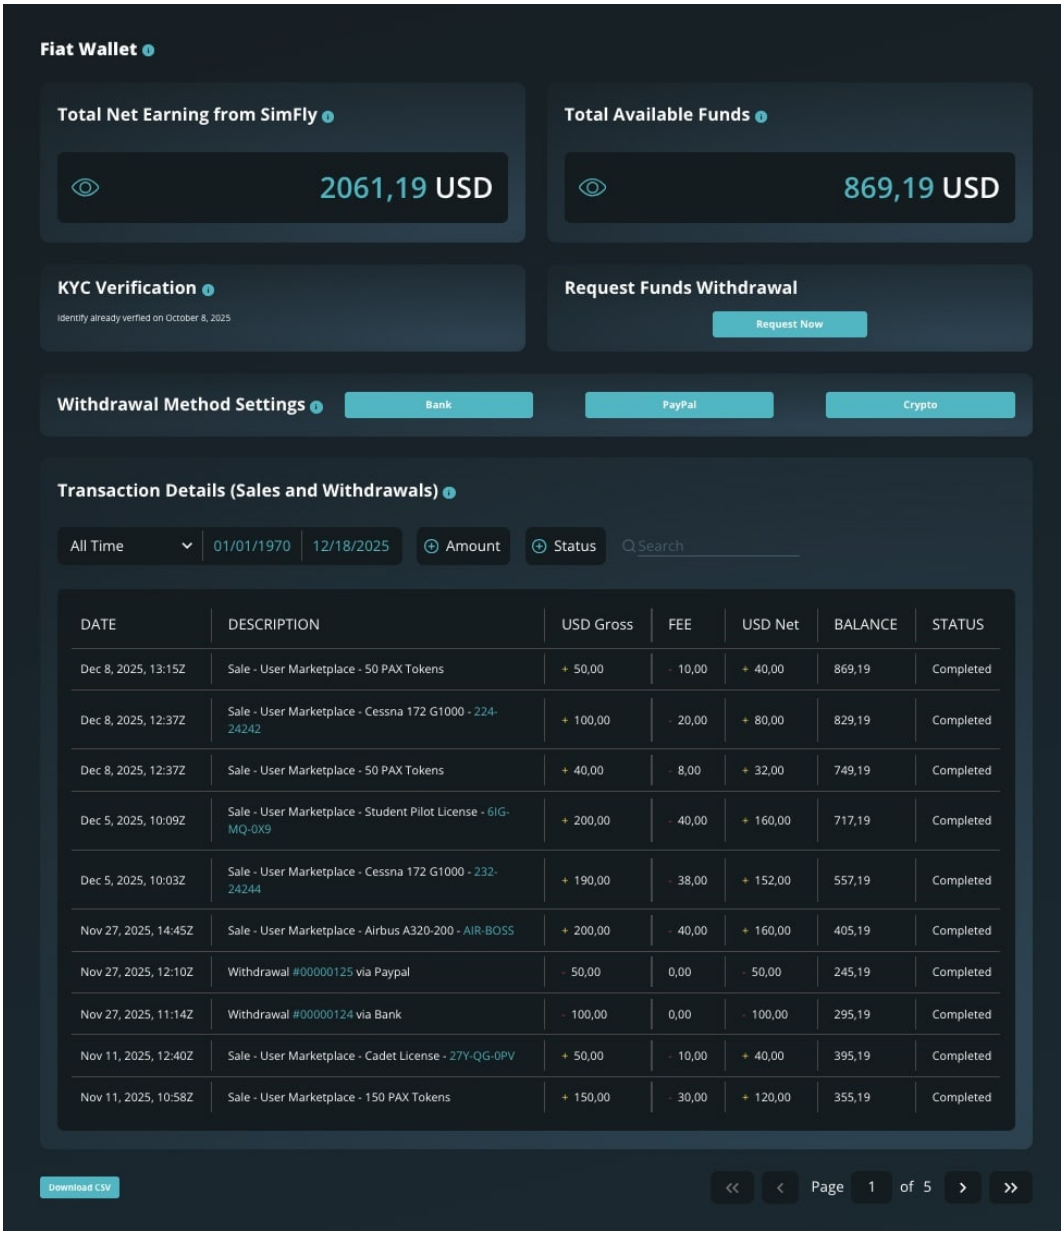

New Assets Sale.

Integration with the Fiat Wallet

Each completed sale in the **User Marketplace** generates a credit in **USD or PAX Tokens**, depending on the payment method selected for your asset.

From the **Fiat Wallet**, if the sale was completed in **USD**, you can view your available balance, track all transactions, and **request a withdrawal** to your **bank account**, **PayPal**, or **crypto** at any time.

For more information, see:
[**Guide to the Fiat Wallet** →]

Fiat Wallet

Integration with the PAX Wallet

The **PAX Wallet** records all operations involving **PAX Tokens** within the **User Marketplace**, for both **buyers** and **sellers**.

For Buyers

When you purchase **PAX Tokens** from other users in the **User Marketplace**, the operation is recorded as an **incoming transaction** in your PAX Wallet, indicating the purchased quantity and the price in USD.

The PAX Tokens are **immediately credited** to your available balance and become **ready for use** as

soon as the purchase is confirmed.

When you use your **PAX Tokens** to buy other assets (such as Licenses, Aircraft, or Airports), the transaction is recorded as an **outgoing operation**, showing the amount spent and the reference to the purchased asset.

For Sellers

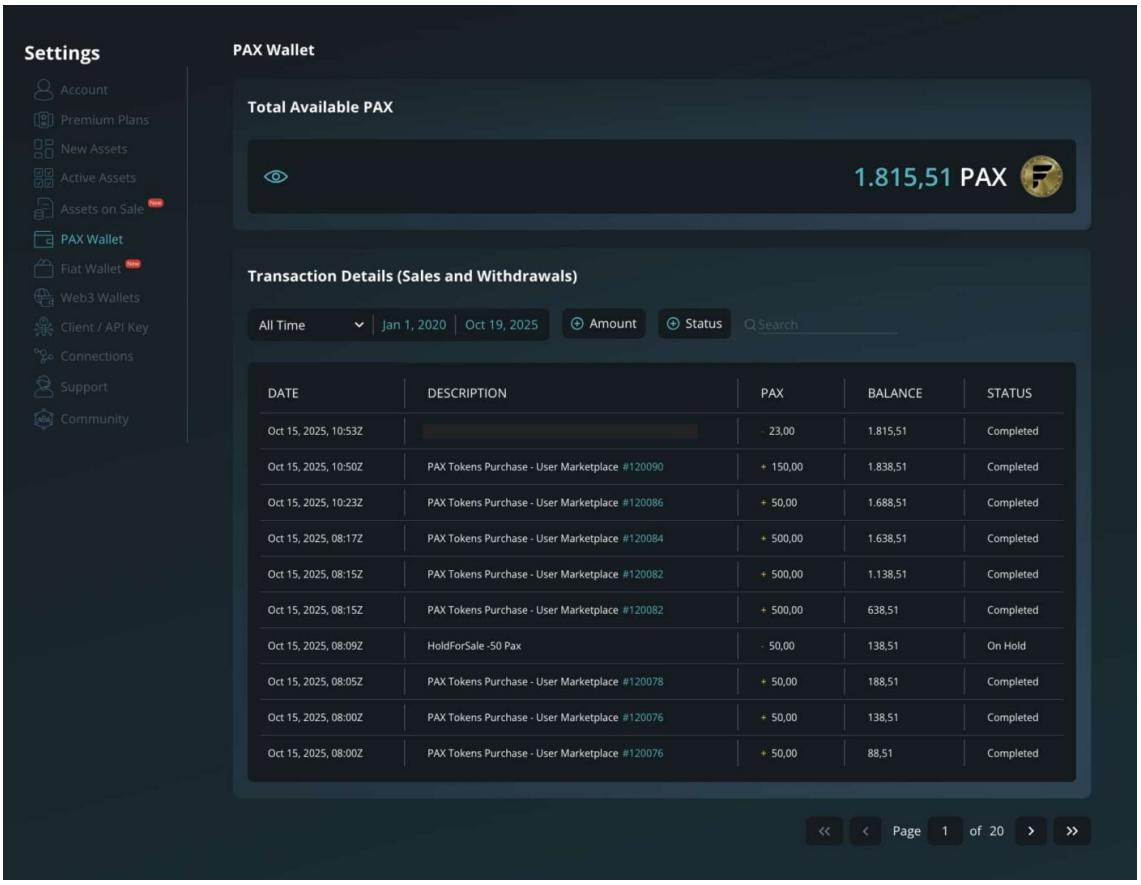

When you list **PAX Tokens** for sale, the tokens associated with your offer are temporarily moved to an **“On Hold”** state until the transaction is completed.

Once the sale is confirmed, the **PAX Tokens** are **credited to the seller’s available balance**.

In case of a cancellation or error, the **held tokens** are **automatically released** and returned to the available balance.

Note: the system automatically manages all PAX Token operations, ensuring **full traceability** and **security** throughout every stage of the process.

For more information, see:
[**Guide to the PAX Wallet** →]

PAX Wallet

Security and Transparency

All transactions carried out in the **User Marketplace** are **secure, traceable, and verified**.
The system automatically records every operation, applying **anti-fraud and anti-abuse controls** to each transaction to ensure the **integrity of the market**.

In the event of an **error or cancellation**, the corresponding amount or asset is **automatically restored** to the user's balance.
